

Hi. I'm **David Furlong** and I want to be your **IT Rep**.

I am a first year Computer Science & Philosophy student from Germany. I have been programming websites since I was 14 and I am familiar with Wordpress, which underlies our JCR website. I have my own website and I have created websites and designs for businesses and startups.

As the IT Rep, my primary task would be to update and improve upon the JCR website. Additionally I would be responsible for meeting with the College Computing Committee, maintaining the JCR mailing list and working on improving the college's computing facilities.

In Hilary Term, I sent an email to the JCR president and the IT rep regarding possible improvements to the printing system here at Catz. The current state of printing at Catz is not satisfactory to the size and resources of our College. Many students have resorted to buying their own printers to tackle the inconvenience and cost of printing in college, which is not an efficient long-term solution.

The main problems with the printing at Catz are:

- Lack of document scanning capable printers
- The JCR printer room printers are slow, and they run out of paper or jam frequently, and due to them being locked are not able to be used
- The printers are outdated and old and with the increase in digital work we need an improvement to our printing facilities at Catz.
